Pack : **10 Capsules**
Brand name : **Thalidomide 50mg Capsule**
Content : **Thalidomide 50mg**
Therapeutic Use : **It is used in the treatment of multiple myeloma and lepra reaction**

Product Description :

What is Thalidomide 50mg Capsule?

Thalidomide 50mg Capsule is used in the treatment and prevention of Erythema nodosum leprosum, formerly known as Hansen's disease and other skin disorders. A specific type of cancer called multiple myeloma is also treated with thalidomide. It treats Hansen's disease by minimizing inflammation-related swelling and redness. Additionally, it lessens the development of vessels of blood that feed tumors.

How Thalidomide Capsule Works?

Thalidomide controls the body's immune system's activity, which assists in indirectly combating cancer cells. Additionally, it prevents cancer's blood vessel development.

Thalidomide 50mg Capsule - How to Use

- Thalidomide 50mg Capsule should be taken every day at about the same time(s). Take this medicine usually at least one hour after eating dinner, right before going to bed. With water, swallow this medication whole.
- Ask your doctor to clarify any instructions you do not understand, and carefully follow the instructions on your prescription label.
- Usually at least one hour after eating dinner, right before going to bed. With water,

swallow this medication whole.

- The dosage is determined by your health status and treatment response. Do not use this medication in larger amounts or more frequently than recommended. Your disease won't get better any faster, and there's a chance that you'll experience more severe side effects.
- As soon as you're ready to use the capsules, keep them in their blister pack. The capsules should not be handled more than is necessary, neither opened nor broken. Wash the spot with water and soap if any of the capsule's powder gets on your skin.
- It is not recommended for pregnant women to handle this drug or inhale the dust released by broken capsules.

Precautions for Thalidomide

- If you have an allergy to Thalidomide, any other drugs, or any of the inert substances in the Thalidomide 50mg capsule, let your doctor know right away.
- Inform your doctor about all prescription and over-the-counter drugs, vitamins, dietary supplements, and natural remedies you are now taking or intend to use.
- If you have diabetes, renal or liver problem, a blood clot somewhere in your body, or a stroke, let your doctor know.
- Inform your doctor about your medical history before using this drug, particularly of: certain blood diseases, numbness in the arms or legs, and seizures.
- HIV-positive individuals should use this medication with caution as they may be more vulnerable to its side effects. Thalidomide may have an impact on your viral load even if it is used in the treatment of muscle weakness and other HIV-related problems.
- Be sure to let your doctor know if you're nursing a baby or pregnant. The fetus could be harmed by Thalidomide. If you are taking a Thalidomide capsule, you should not breastfeed.
- During or soon after your treatment, let your doctor or dentist know if you need to have surgery, including dental surgery.
- You can feel drowsy or sleepy after taking this medication. Until you are capable of doing anything safely, avoid driving, using machinery, and performing other tasks that call for

alertness.

Thalidomide Capsule - Side Effects

- Constipation, weakness, light-headedness, drowsiness, and dry skin are possible side effects. Inform your doctor as soon as possible if one or more of these side effects persist or worsen.
- When getting out of a sitting or laying posture, take it gently to lessen the chance of feeling lightheaded and dizzy.
- If you experience any severe side effects, such as mood changes (confusion, anxiety), shaking, breathing problems, arm or leg swelling, irregular heartbeat, bleeding, bloody stools, or vomit that resembles coffee grounds, call your doctor right away.
- You should keep in mind that your doctor recommended this drug because she or he thought it would benefit you more than it would harm you. Many users of this medicine report no significant negative effects.
- The side effects listed here are not all conceivable negative effects. Contact your doctor if you experience any other effects not covered above.
