

Product Information :

Pharmaceutical form :

Category : Dietary Supplements

Pack : -

Brand name : -

Content : -

Therapeutic Use : -

Product Description :

How is a Urinary Tract Infection Acquired?

UTI infection is one of the most frequent among all bacterial infections. A UTI can affect people of any age. However, UTIs most frequently affect young to middle-aged sexually active women. The bacteria are the primary cause of most UTI cases. They carry out these actions utilizing hair-like fimbriae that project from their surfaces. The fimbriae cling to particular cell receptors. Usually, they enter through your urethra, and they could infect your bladder. Additionally, the infection has the potential to ascend from your bladder to your ureters and ultimately infect your kidneys. UTI care supplement works to stop infections by preventing the fimbriae from attaching to your cells.

Role of UTI Care Supplement

The purpose of UTI care is to assist remove E. coli and other pathogens from the urinary system by establishing an "unfriendly" environment. Our UTI care supplement contains the best ingredients and herbs for a healthier urinary tract system. UTI Care provides rapid relief from burning, itching, or pain in the lower abdomen when peeing, as well as from all sorts of kidney infections and bladder-related problems. Its diuretic properties encourage normal

urine flow.

Benefits of UTI Care Supplement

Reduces burning and painful urination:

The anti-inflammatory and analgesic qualities of this UTI care supplement help to calm the inflamed mucosa and lessen the burning or discomfort that is experienced during urinating.

Normalizes pH equilibrium:

Urine pH levels are a sign of health issues. Kidney disease results in an extremely high urine pH (alkaline). Urinary tract infections, diarrhea, malnutrition, or diabetes problems can all result in extremely low urine pH (acidic). Additionally, these supplements aid in preserving a healthy pH balance in the urine.

Diuretic effect

The blood flow to the kidneys is increased by these UTI supplements. The result is an increase in urine production. These supplements fight against pathological conditions including cystitis and urethritis.

Antibacterial Qualities:

These UTI supplements fight the common bacteria responsible for UTIs of various aetiologies thanks to their antimicrobial characteristics.

Antioxidant Characteristics

The antioxidant capabilities of this supplement guard the genitourinary system from oxidative damage. Additionally, it increases the amount of magnesium in the urine, which prevents urine crystallization (the creation of minerals in the urine).
