

Revolade Tablet

Product Information :

Pharmaceutical form : Tablet

Category : Anti Cancer

Pack : 1x7/Tabs

Brand name : Revolade Tablet

Content : Eltrombopag (50mg)

Therapeutic Use : Low platelet count due to ITP or HCV infection & Treatment of Severe Aplastic Anemia

Product Description :

What is Revolade Tablet?

Revolade Tablet is a type of drug known as a thrombopoietin receptor agonist. It's used to treat low platelet counts (immune thrombocytopenia) in adults and pediatric patients one and up who haven't responded to prior treatments. It is also used to cure thrombocytopenia in people with hepatitis C who are unable to get interferon therapy. In adult patients with severe aplastic anaemia, it may also be used to treat low blood counts. Follow the doctor's instructions for dosage and duration. It is possible to consume it on an empty stomach. This medication should be eaten whole. It should not be chewed, crushed, or broken. If you have any known reactions to this medication, tell your doctor.

How To Use

- Follow your doctor's instructions for taking Revolade Tablet. With a glass of water, swallow the pill. The drug should not be crushed or chewed. Depending on your condition, your doctor will determine the appropriate dose for you.
- Make sure you're not eating dairy products like cheese, butter, yoghurt, ice cream, milk,

or milkshakes. This medicine should be taken 4 hours before or 2 hours after it has been taken.

- The dose is regulated as necessary to keep the proper platelet level, depending on the patient's age and the ailment Revolade is used to treat.

How It Works

Revolade Tablet is a Thrombopoietin (TPO) receptor agonist that is non-immunosuppressive. It specifically targets the TPO receptor's transmembrane surface, which is found mainly in human bone marrow neural stem cells and megakaryocytes. It raises the cell count in your bone marrow and improves platelet production, lowering your risk of bleeding.

Revolade Tablet Benefits

- In adults and children 1 year of age and older who have chronic idiopathic thrombocytopenic purpura and have a low platelet count owing to ITP or HCV infection, Revolade Tablet is used to raise the number of platelets and reduce the risk of bleeding.
- It is used in individuals who have not responded to or are unable to respond to other therapies, such as medicines or spleen removal surgery. Revolade Tablet is also used to help persons with hepatitis C raise their platelet count. It's frequently administered in conjunction with other medications.

Side Effects of Revolade

The majority of side effects are minor and will go away as your body adapts to the medication. If they don't go away or you're concerned about them, consult your doctor.

Revolade's most common side effects are

- Nausea
- Diarrhoea
- Infection of the upper respiratory tract
- Vomiting
- Increased levels of liver enzymes

- Muscle ache
- Infection of the urinary tract

Revolade Tablet Supplier

Healthiza is one of the leading Revolade Tablet supplier and manufacturer, offering the best quality medicine globally through a validated cold chain secure shipment process. We use this process to manufacture, store and deliver medicines at a very specific temperature. Customers can avail of this premium quality pharma product at an affordable price from us.
