Imatinib Tablet

Product Information :

Pharmaceutical form : **Tablet**
Category : **Anti Cancer**
Pack : **1x10/Tabs**
Brand name : **Imatinib Tablet**
Content : **Imatinib mesylate (400mg)**
Therapeutic Use : **Blood cancer (Chronic myeloid leukaemia) & Blood cancer (Acute lymphocytic leukemia)**

Product Description :

What is Imatinib Tablet?

Imatinib Tablet is used to treat a variety of cancers (bone marrow disorders, and skin cancer). It works by stopping or preventing cancer cell proliferation. Certain immune system illnesses may also be treated with imatinib (such as aggressive systemic mastocytosis, hypereosinophilic syndrome). It is often used to treat some stomach and digestive tract cancers.

How To Use It

- Take this medication by mouth once or twice daily with food and a full glass of water, as advised by your doctor.

- Imatinib Tablet should not be crushed. You can dilute the tablets in a glass of water if you have problems swallowing them whole.

- The dosage is determined by your medical condition, treatment response, and any other medications you're taking.

- If your medical experts think it is suitable for you, don't eat grapefruit or drink grapefruit juice while taking this medication.

- Women who are pregnant or may become pregnant should not use this medication or breathe the dust from the pills since it can be absorbed into the body and lungs and harm an unborn baby.

Imatinib Tablet Benefits

In Blood Cancer (Chronic myeloid leukaemia)

- Blood cancer, often known as leukaemia, is a type of cancer that affects the body's ability to fight infection by affecting the blood-forming tissues. Imatinib Tablet destroys or slows the growth of cancer cells while also preventing them from multiplying. It's powerful and poisonous medicine, so talk to your doctor about the dangers and advantages. While undergoing this treatment, you should avoid consuming alcohol and drink enough water to stay hydrated.

Side Effects of Imatinib

- The majorities of side effects are minor and go away as your body adapts to the medication. If they continue or you're concerned about them, see your doctor.

- Nausea, vomiting, diarrhoea, headaches, joint pain, muscle cramps, dizziness, blurred vision, or drowsiness are all possible side effects.

- This drug may make it more difficult for you to fight infections. This could increase your chances of getting a severe infection or making any infection you already have worse.

- Because of the rapid death of cancer cells, imatinib tablet might produce negative effects (tumour lysis syndrome). Unless your doctor tells you otherwise, drink lots of fluids to reduce your risk.

- Imatinib tablet can induce a rash, which is usually not dangerous.

- Consult the doctor if you have any other side effects not listed above.

Some Tips For Using Imatinib

- To avoid nausea, use it with a meal and a full glass of water.

- It can make you feel dizzy or cause your eyesight to blur. Do not drive or do anything else that requires attention until you have a better understanding of how it affects you.

- Imatinib Tablet side effects include water retention and oedema. Inform your doctor if you've gained a lot of weight in a short period of time.

- Without consulting your doctor, do not change the dose or stop using the medication.

- Regular blood tests to assess your liver function and the number of blood cells in your blood may be ordered by your doctor.

Imatinib Tablet Supplier

Healthiza is one of the leading Imatinib Tablet supplier and manufacturer, offering the best quality medicine globally through a validated cold chain secure shipment process. We use this process to manufacture, store and deliver medicines at a very specific temperature. Customers can avail of this premium quality pharma product at an affordable price from us.
