

Clobetasol Propionate, Neomycin Sulphate & Miconazole Cream

Product Information :

Pharmaceutical form : External Preparation

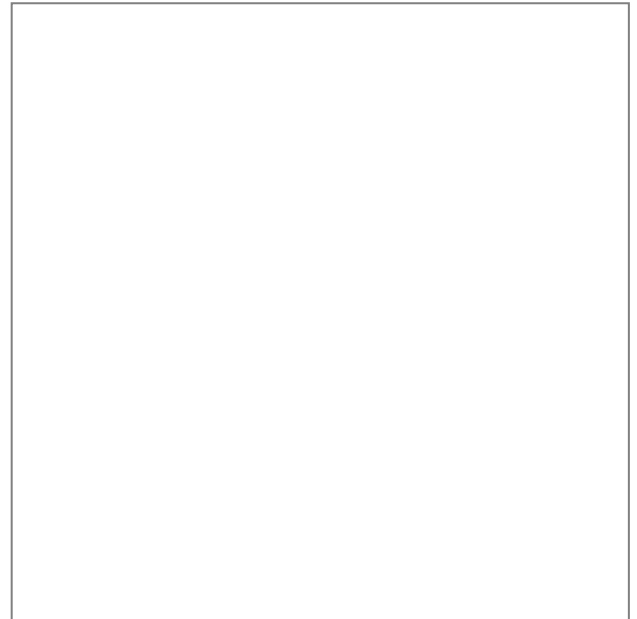

Category : OTC

Pack : 1x15gm

Brand name : Clobetasol Propionate, Neomycin Sulphate & Miconazole Cream

Content : Clobetasol (0.05% w/w) + Miconazole (2% w/w) + Neomycin (0.5% w/w)

Therapeutic Use : Treatment of Skin infections

Product Description :

What is Clobetasol Propionate, Neomycin Sulphate & Miconazole Cream?

Clobetasol Propionate, Neomycin Sulphate & Miconazole Cream is an anti-infective medicine used in the treatment of swelling, itching, and redness associated with bacterial or fungal skin infections. CLOBETASOL+MICONAZOLE+NEOMYCIN is an antibacterial and antifungal combination that efficiently heals bacterial and fungal skin problems. Bacterial skin infection is induced by dangerous bacteria that develop on the skin. They usually start off as little red lumps on the skin that grow in size over time. A fungus affects the tissue (usually sweaty places that don't receive enough airflow) and infects it, resulting in a fungal skin infection.

How It Works

This cream is a three element mixture that includes Clobetasol, Miconazole, and Neomycin. Clobetasol relates to the corticosteroid family. It inhibits the formation of prostaglandins (chemical messengers) that induce skin infection symptoms like redness, swelling, and itching. Miconazole is an antifungal medication that kills fungus by creating holes in their cell membranes. Antibiotic neomycin is a kind of antibiotic. It stops bacteria from making critical

proteins that they need to continue with their activity. It is exclusively available as a cream for topical use (on the skin). You must take this medication exactly as directed by your doctor.

How to Use

- Clobetasol Propionate, Neomycin Sulphate & Miconazole is available as a cream. Before of applying it, gently clean the afflicted region with saline or water.
- Use a clean cotton towel to pat the skin and dry it. With clean and dry hands, apply a thick layer of cream to the afflicted parts of the skin and spread it evenly to produce a 1/8-inch thick layer.
- It can also be applied with a clean cotton swab or gauze swab. Unless the therapy is for hands, wash your hands before and after administering .

Precaution - Clobetasol Propionate, Neomycin Sulphate & Miconazole Cream

- This medicine is only for topical (skin) application and should not be used on bigger skin regions.
- If your doctor has prescribed it, do not use it for an extended period of time. It's advisable not to cover the treated region, primarily the face, with a wrap or bandage without first consulting your doctor.
- Do not put the drug in your eyes or near your eyes. If the drug goes into your eyes, nose, mouth, or genital area, rinse thoroughly with water.
- Stop using Clobetasol Propionate, Neomycin Sulphate & Miconazole Cream and tell your doctor immediately if you experience any continuous skin irritation or worsening of your skin disease.

Benefits of Medication

This medicine is a three-drug mixture that includes Clobetasol, Miconazole, and Neomycin. Clobetasol is a type of corticosteroid medicine that prevents the production of chemical messengers that produce redness, irritation, and swelling in the body. Miconazole is a type of antifungal that kills fungus by generating holes in their cell membranes. Neomycin is an antibiotic that prevents bacteria from producing vital proteins that they need to grow,

multiply, and reproduce. Clobetasol Propionate, Neomycin Sulphate & Miconazole Cream can effectively cure skin infections when used together.

Side Effects

- It can produce adverse effects, though not everyone experiences them.
- If you have side effects such as skin redness, itching, dryness, irritation, or thinning you should see a doctor.
- The majority of its side effects do not require medical care and go away with time. However, if the negative effects do not go away, consult your doctor.

Some Tips for Using

- When taking a bath, use mild soap and opt for a warm bath.
- On your skin, stay away from harsh products.
- To avoid infecting the affected region, do not rub or pick at it.
- Manage your stress, eat well, drink enough water, exercise regularly, and sleep well.
- Limit your intake of foods that may cause allergies, such as dairy, soy, eggs, and nuts.
- Foods high in sugar should be avoided because they can aggravate inflammation.
- Fruits, vegetables, whole grains, healthy fats, and seafood should all be part of your diet.
- Avoid contact with rough soaps, detergents, and rough materials.
